

Date: 20 April 2026

Field pea blackspot risk forecast for South Australia

Field Pea Blackspot Risk Forecast is a location and season specific weekly forecast. It accounts for varietal resistance and chemical options, agronomic yield potentials, agronomic constraints (frost and terminal drought), risks of spore showers, disease severity, and disease related yield loss. It then weighs agronomic yield loss and disease yield loss and suggests a window of sowing dates.

This prediction is based on DPIRD's Blackspot Manager model using weather data from 1st January 2026 to 19 April 2026 from the nearest weather station.

You may notice weather station changes for some locations. This is to ensure that the weather data being used is the most accurate available for the area and uses open BOM weather stations whenever possible. In some locations, a suitable weather station may not be available and so we may use interpolated weather data, which uses data from surrounding stations to create reasonable values for missing weather data.

Sowing time can depend on a range of factors and it is recommended to consult an agronomist to determine the optimal sowing window for your situation.

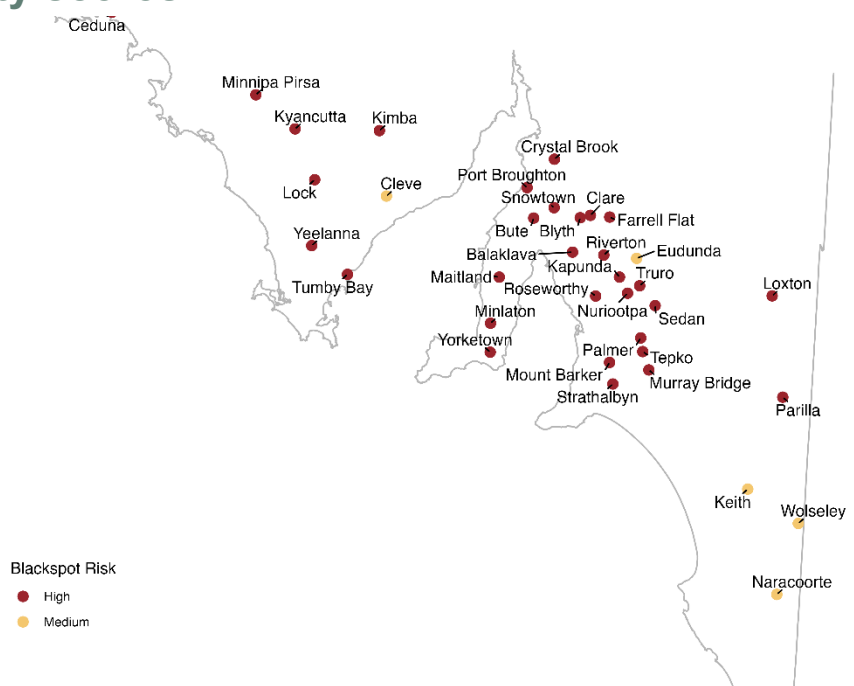

Missing a location or would like to receive email or SMS alerts?

Sign up today to get alerts and add your local weather station. Text 'blackspot', your name and nearest weather station to 0475 959 932 or email BlackspotManager@dpiird.wa.gov.au.

Key to blackspot severity scores

The aim is to delay sowing of field pea crops, where agronomically possible, until the majority of blackspot spores (approximately 60%) have been released prior to the crop emergence. This strategy reduces yield losses from blackspot.

Map showing the relative current risk of spores based upon blackspot model outputs for various location in SA, 20 April 2026.

Blackspot risk	Spores released (%)	Range of yield loss for different levels of blackspot risk (%)
Low	60 - 100	2 - 15
Medium	30 - 59	20 - 35
High	0 - 29	25 - 50

Note. Locations have been listed A-Z

Balaklava

Last date used for prediction: 19 April 2026

Rainfall to date: 84.1 mm

Days with significant stubble moisture: 30

Forecast for crops sown on	20 Apr	26 Apr	3 May
Spores released	12%	15%	29%
Blackspot risk	High	High	High

Blyth

Last date used for prediction: 19 April 2026

Rainfall to date: 96.3 mm

Days with significant stubble moisture: 33

Forecast for crops sown on	20 Apr	26 Apr	3 May
Spores released	17%	21%	36%
Blackspot risk	High	High	Medium

Bute

Last date used for prediction: 19 April 2026

Rainfall to date: 141.2 mm

Days with significant stubble moisture: 31

Forecast for crops sown on	20 Apr	26 Apr	3 May
Spores released	13%	17%	31%
Blackspot risk	High	High	Medium

Ceduna

Last date used for prediction: 19 April 2026

Rainfall to date: 149 mm

Days with significant stubble moisture: 38

Forecast for crops sown on	20 Apr	26 Apr	3 May
Spores released	27%	31%	48%
Blackspot risk	High	Medium	Medium

Clare

Last date used for prediction: 19 April 2026

Rainfall to date: 128.8 mm

Days with significant stubble moisture: 38

Forecast for crops sown on	20 Apr	26 Apr	3 May
Spores released	27%	31%	48%
Blackspot risk	High	Medium	Medium

Cleve

Last date used for prediction: 19 April 2026

Rainfall to date: 132.1 mm

Days with significant stubble moisture: 52

Forecast for crops sown on	20 Apr	26 Apr	3 May
Spores released	59%	64%	77%
Blackspot risk	Medium	Low	Low

Crystal Brook

Last date used for prediction: 19 April 2026

Rainfall to date: 79.6 mm

Days with significant stubble moisture: 38

Forecast for crops sown on	20 Apr	26 Apr	3 May
Spores released	27%	31%	48%
Blackspot risk	High	Medium	Medium

Eudunda

Last date used for prediction: 19 April 2026

Rainfall to date: 104.4 mm

Days with significant stubble moisture: 41

Forecast for crops sown on	20 Apr	26 Apr	3 May
Spores released	34%	38%	55%
Blackspot risk	Medium	Medium	Medium

Farrell Flat

Last date used for prediction: 19 April 2026

Rainfall to date: 91.5 mm

Days with significant stubble moisture: 36

Forecast for crops sown on	20 Apr	26 Apr	3 May
Spores released	23%	27%	43%
Blackspot risk	High	High	Medium

Kapunda

Last date used for prediction: 19 April 2026

Rainfall to date: 60.2 mm

Days with significant stubble moisture: 28

Forecast for crops sown on	20 Apr	26 Apr	3 May
Spores released	9%	12%	25%
Blackspot risk	High	High	High

Keith

Last date used for prediction: 19 April 2026

Rainfall to date: 87.2 mm

Days with significant stubble moisture: 41

Forecast for crops sown on	20 Apr	26 Apr	3 May
Spores released	34%	38%	55%
Blackspot risk	Medium	Medium	Medium

Kimba

Last date used for prediction: 19 April 2026

Rainfall to date: 122 mm

Days with significant stubble moisture: 27
