Lemonade Valley Biodiversity Project

Carbon for Farmers Voucher Program Recipient

Greg and Katja McNeil

Location	Mt Caroline (Kellerberrin), WA
Project area	200 ha
Property size	1,967 ha
Permanence period	25 years

Biodiversity

Agricultural Productivity

Soil Health

Salinity Mitigation

Aims

- The Lemonade Biodiversity Project will link 200 ha of cleared land with 130 ha of remnant vegetation to form a continuous covering through biodiverse species plantings across a 330 ha project site.
- Restoration of low-productivity farmland and conservation assets through biodiverse native species plantings.
- Income diversification through carbon credits and commercial-scale production of medical grade table honey.

Activities

- Regenerate cleared and remnant vegetation by reintroducing native plant species, forming a continuous covering across the project site.
- Revegetate with deep-rooted native plants to create wind breaks while improving soil health and water retention.
- Establish a mix of flowering trees that can be used for honey production.
- Construct fencing to protect young plants against feral animals and pests.
